Bachelors of Arts – Business Administration

Concentration: Supply Chain Management

PROJECTS

LVNGbook– *Full-Site Development*

The client was in need of a new look for her website. She wanted to continue with using WordPress as her CMS. I developed a custom theme that would give her a more modern look. She also was in need of improving her visibility online. I created a Google Analytics account for her so that she could track the performance of her website, as well as pinpoint some pain points in her website flow. We were able to spot some parts of her site, where visitors would drop off from the website. We then developed a solid marketing strategy that increased her traffic by 90% as well as increased conversions for her email list.

Tutor-N-More – *Full-Static Website*

This was a simple project with a quick turnaround. The client was in need of a website. Her business has always been slow, which made it very difficult for her to consistently have a full class tutorial session. I helped the client create a simple, fully responsive static website. I used HTML5, CSS3, JavaScript, and Bootstrap4 just to name a few. I was able to create a user-friendly website for parents in the community to go to. She was able to successfully secure more clients. Her attendance rate went up 30% and is slowly increasing throughout the weeks.
